Hi Lynn,

I attached the survey. I also pasted some info about the different components at the end of this email.
Please let me know if you think it's feasible to include this, and Melissa and I are happy to help however we can!

Best,
Ruby

**Survey Info**

Part 1:
Michigan measure (should occur before everything else, and be spaced out as far away as possible). There are 3 different versions of the second item in this question depending on their answer to the first question (display logic)

Part 2: Image
Survey flow targets dem and rep (based on Michigan measure) separately, and evenly presents 1 of 5 images and associated 2 other qns. response options for the first qn are randomized.

Part 3: Threat
Should be displayed immediately after the Image block. Display logic and survey flow assign one of two versions depending on affiliation reported in michigan measure

Part 4: COVID qn
Should be displayed immediately after the threat qn

Melissa (our other collaborator, Cc'ed) is putting the finishing touches on that survey, and we will send it to you ASAP.
>>
>> The one thing is, while the task is simple, it does involve some important adjustments to the survey flow, and some of the components need to be spaced out, which it's essential that others remain close together. I will send more info when the survey is ready to export.

On and I will meet with Mike later today to discuss next steps. We are aware that it's coming pretty close to the date the survey goes out now, so we realize that adding the task in this round will most likely not be feasible (it's just 3-5 questions per subject, but there's a slightly complicated survey flow involved). I will reach out to you once we've finalized everything!

Best,
Ruby

From the meeting, it seems that you and Uri probably have some setup already I assume since he mentioned collecting data from MTurk. If this will done over Qualtrics, I think the easiest way would be for you to set it up as a survey and send us the qsf file (Lynn, feel free to jump in if you have better ideas), which we can then import and add to the main weekly survey. And of course, if there are some additional things that need to be adapted, please message us on Slack and we can work on this together.
